EXPERIENCE

Prodigy

Software Engineer Intern – Backend

Toronto, ON

Jan 2022 – Present

- Designing, developing, and testing backend services/infrastructure to help every student in the world love learning

OpenText

Software Engineer Intern – Backend

Waterloo, CA

May 2021 – Aug 2021

- Migrated upwards of **3 million** user files by decrypting and encrypting with newly generated user keys to increase security
- Developed **Node.js** applications to verify, transform, and deploy (ETL) new data sets to production builds
- Resolved customer issues by investigating data discrepancies in **PostgreSQL** and **Postman** to sleuth user API's
- Developed and deployed a system which is responsible for Tenant Encryption and Decryption of files using Kafka and AWS
- Created comprehensive test suites using **Mocha** and **Chai** to reduce intermittent issues by 15% ~ improved quality of code

Westend

Software Developer - Freelance

Milton, ON

May 2020 – Aug 2020

- Created EzPay, a web alternative to an online checkout that makes small business capable to execute online orders
- Architected and built **Node.js** backend API, handled CRUD operations and managed request, routing and responses
- Increased sales by **25%** by providing this online checkout option as a solution to reduce in person traffic for COVID-19
- Organized development team to utilize Flask as a web-framework to execute database queries regarding select products

JPMorgan Chase&Co.

Software Engineer Virtual Experience

Remote

Winter 2020

- Architected and built **Perspective 2.0**, a visualizer that displays visual representation of stock prices on trader's dashboard
- Utilized React, typescript and JPMorgan's open-source software to build customizable graphs to display trends for stocks
- Developed a system to analyze stock price data with **Python** and **Perspective 2.0** to deliver actionable insights in real time

PROJECTS

Sweet!

Oct 2020 – Jan 2021
